

## Smart City Model Design Competition

The Smart City Model Design Competition aimed to encourage primary school students to make use of their creativity and innovative ideas to design an ideal smart city with engineering knowledge. Participating teams should create a smart city model with environmentally friendly materials and submit a two-minute video clip to introduce the smart city model for the review of the Panel of Judges. The participating models were assessed on the basis of content, creativity, design and the principle of environmental friendliness on the use of materials.

The award-winning models and the videos were showcased at the HKIE Engineer Day on 13 April 2019 for public viewing. All awards were presented at the Closing cum Prize Presentation Ceremony of the HKIE Engineer Day.

The competition was considered a great success as well as a fruitful experience for students. The results were:
